

EXPERIMENT NO: 1: IMPLEMENTATION OF TELEPHONE BILL USING CLASS AND OBJECT

PROGRAM

```
class TelephoneBill {
    int customerNo, previousMinutes,
currentMinutes;
    String customerName, type;

    TelephoneBill(int no, String name, int prev,
int curr, String type) {
        customerNo = no;
        customerName = name;
        previousMinutes = prev;
        currentMinutes = curr;
        this.type = type;
    }

    double calculateBill() {
        int minutes = currentMinutes -
previousMinutes;
        double bill;

        if (type.equalsIgnoreCase("prepaid")) {
            if (minutes <= 100)
                bill = minutes * 1;
            else if (minutes <= 200)
                bill = 100 + (minutes - 100) *
1.5;
            else
                bill = 100 + 100 * 1.5 + (
minutes - 200) * 2;
        } else {
            if (minutes <= 100)
                bill = minutes * 0.75;
            else if (minutes <= 200)
                bill = 100 * 0.75
                    + (minutes - 100) * 1.25;
            else
                bill = 100 * 0.75 + 100 * 1.25
                    + (minutes - 200) * 1.75;
        }
        return bill;
    }
}
```

```
public static void main(String[] args) {  
    TelephoneBill t =  
        new TelephoneBill(201, "Anu", 300,  
550, "postpaid");  
  
    System.out.println("Customer No: " + t.  
customerNo);  
    System.out.println("Customer Name: " +  
t.customerName);  
    System.out.println("Minutes: "  
        + (t.currentMinutes - t.  
previousMinutes));  
    System.out.println("Bill Amount: Rs." +  
t.calculateBill());  
}  
}
```

OUTPUT

```
Customer No: 201  
Customer Name: Anu  
Minutes: 250  
Bill Amount: Rs.362.5
```
