

EXPERIMENT NO: 2: IMPLEMENTATION OF PACKAGE FOR TEMPERATURE CONVERTER

PROGRAM

```
// File: Converter.java
package temperature;

public class Converter {
    public static double celsiusToFahrenheit(
double c) {
        return (c * 9 / 5) + 32;
    }

    public static double fahrenheitToCelsius(
double f) {
        return (f - 32) * 5 / 9;
    }

    public static double celsiusToKelvin(double
c) {
        return c + 273.15;
    }

    public static double kelvinToCelsius(double
k) {
        return k - 273.15;
    }

    public static double fahrenheitToKelvin(
double f) {
        return (f - 32) * 5 / 9 + 273.15;
    }

    public static double kelvinToFahrenheit(
double k) {
        return (k - 273.15) * 9 / 5 + 32;
    }
}

// File: TemperatureMain.java
import temperature.Converter;

class TemperatureMain {
    public static void main(String[] args) {
```

```
        double c = 25;

        System.out.println("Celsius to
Fahrenheit: "
        + Converter.celsiusToFahrenheit(c));
        System.out.println("Celsius to Kelvin: "
        + Converter.celsiusToKelvin(c));
        System.out.println("Fahrenheit to
Celsius: "
        + Converter.fahrenheitToCelsius(
77));
        System.out.println("Kelvin to Celsius: "
        + Converter.kelvinToCelsius(298.
15));
    }
}
```

OUTPUT

```
Celsius to Fahrenheit: 77.0
Celsius to Kelvin: 298.15
Fahrenheit to Celsius: 25.0
Kelvin to Celsius: 25.0
```
